Sun Prairie West Side Greenway

An Evolution in Stormwater Management

MSA Professional Services recommended a natural solution as opposed to construction of a traditional stormwater detention pond that would occupy more land and be less effective.

The solution recovered 20.6 acres of land from the floodplain and saved 3.5 acres within the developments that otherwise would have been needed for on-site stormwater management.

The undeveloped value of this land is $1.2 million that can add to the tax base in the future. Restored wetlands, native plantings, and large development setbacks provide environmental enhancements.
