

All About Wisconsin Roundabouts
Wisconsin Department of Transportation

Roundabouts have been steadily gaining popularity in communities across the United States. Still a relatively new option to control intersections, the *All About Wisconsin Roundabouts* DVD was a tool developed by SRF Consulting Group, Inc., in close collaboration with the Wisconsin Department of Transportation, to explain the benefits and operations of the one-way circular intersections.

The DVD was a ten-minute, informative presentation showing real-world scenarios from a behind-the-wheel perspective and the rules to remember when navigating a roundabout. Using a DVD format created the ability to deliver a consistent message that could be communicated to large audiences efficiently and through different outlets such as public meetings, cable access stations and the intranet.
